"Therse murine cataract mutants (Cat2) are defective in different gamma-crystallin genes.";

Genomics 52:152-158(1998)

-!- FUNCTION: CRYSTALLINS ARE THE DOMINANT STRUCTURAL COMPONENTS OF THE VERTEBRATE EXE LENS.

-!- DOMAIN: HAS A TWO-DOMAIN BETA-STRUCTURE, FOLDED INTO FOUR VERY SIMILAR GREEK KEY MOTIFS.

-!- HISCELLANBOUS: THERE ARE SIX DIFFERENT GAMMA CRYSTALLINS IDENTIFIED IN MOUSE LENS.
                                                                                                                                                                                         MEDLINE-85088487; PubMed-6096855; Breitman M.L., Lok S., Wistow G., Piatigorsky J., Treton J.A., Gold R.J.M., Tsui L.-C.; Westow G., Respectable family of the mouse lens: structural and "Gamma-crystallin family of the mouse lens: structural

-!- FUNCTION: CRYSTALLINS ARE THE DOMINANT STRUCTURAL COMPONENTS OF THE VERTEBRATE EYE LENS.
-!- DOWAIN: HAS A TWO-DOMAIN BETA-STRUCTURE, FOLDED INTO FOUR VERY SIMILAR GREEK KEY MOTIFS.
-!- MISCELLANEOUS: THERE ARE SIX DIFFERENT GAMMA CRYSTALLINS IDENTIFIED IN RAT LENS.
-!- SIMILARITY: BELONGS TO THE BETA/GAMMA-CRYSTALLIN FAMILY.

Biochemistry 39:1583-1588 (2000).
--- FUNCTION: Intracranial injection into mice of 10 pmol/g of the peptide induces running in circles and hyperactivity. At higher doses (50 pmol/g), the mice exhibit running and climbing symptoms for close to one hour. Between 130 and 150 pmol/g, characteristic "spasmodic" symptomatology is elicited. A hand clap would make mice jump high and start running rapidly. When exposed to a loud hand clap, or if the cage cover were dropped, the mice lose motor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           MEDLINE-20143473; PubMed-10677206;

-1- FUNCTION: INVOLVED IN THE REGULATION OF RIBOSOMAL RNA SYNTHESIS

AND CELL GROWTH. MAY BE AN INHIBITOR OF THE LEVEL OF BIOSYNTHETIC

AND THUS WITHIN A CELL BY REPRESSING THE PRODUCTION OF RIBOSOMES,

AND THUS THE CAPACITY FOR PROTEIN SYNTHESIS. MIGHT ACT DIRECTLY AS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

control and exhibit seizure-like symptoms from which they eventually recover. At the highest doses tested (over 250 pmol/affect the characteristic spasmodic symptomatology, lethality occurs. Injection of a similar dose range intramuscularly into Siamese fighting fish elicited no unusual symptomatology.

-I SUBCELULIAR LOCATION: Secreted.
-I TISSUE SPECIFICITY: Expressed by the venom duct.
-I MASS SPECIFICITY: MF=2955.0; METHOD=Electrospray.
-I SIMILARITY: BELONGS TO THE P-SUPERFAMILY OF CONOTOXINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 10, p

GENERAL INFORMATION:
APPLICANT: Marc J. Rubenfield et al.
APPLICANT: Marc J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS TITLE OF INVENTION: ARRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 107196.136
CURRENT APPLICATION NUMBER: US/09/252,991A
CURRENT FILING DATE: 1999-02-18
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR FILING DATE: 1998-02-18
                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 6, Application US/09636077A

Sequence 6, Application US/09636077A

Patent No. 6537785

GENERAL INFORMATION:
APPLICATY: OWNERED, WILLIAM
ITILE OF INVENTION: METHODS OF TREATING LYSOSOMAL STORAGE DISEASE
FILE REPERENCE: 195612U50

CURRENT APPLICATION NUMBER: US/09/636,077A

CURRENT PILING DATE: 2000-08-10

PRIOR FILING DATE: 1999-09-14

NUMBER: OF SEQ ID NOS: 52

SOFTWARE: Patentin version 3.0

SEQ ID NO 6

LENGTH: 515
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: ARRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE REFERENCE: 107196.136
CURRENT APPLICATION NUMBER: US/09/252,991A
CURRENT FILING DATE: 1999-02-18
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR APPLICATION NUMBER: US 60/094,190
PRIOR FILING DATE: 1998-02-18
PRIOR PILING DATE: 1998-07-27
NUMBER OF SEQ ID NOS: 33142
SEQ ID NO 32664
                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      FEATURE:
NAME/KEY: VARIANT

Patent No. 5756340

GENERAL INFORMATION:

APPLICANT: Hamman, Rafael

APPLICANT: Hormann, Rafael

APPLICANT: Moskowitz, Haim

TITLE OF INVENTION: Insect Control With Multiple Toxins

TITLE OF INVENTION: 3

CORRESPONDENCE ADDRESS:

ADDRESSEE: Majestic, Parsons, Siebert & Hsue

STREET: Four Embarcadero Center, Suite 1450

CITY: San Franciso

STATE: California
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           NAME/KEY: VARIANT
LOCATION: (8)...(13)
OTHER INFORMATION: Each Xaa is gamma-carboxyglutamic acid.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match 25.0%; Score 47; DB 4; Length 27; Best Local Similarity 45.0%; Pred. Patent No. 6551795
GENERAL INFORMATION:
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
CURRENT APPLICATION NUMBER: US/09/252,991A
CURRENT PILING DATE: 1999-02-18
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR PILING DATE: 1998-02-18
PRIOR FILING DATE: 1998-02-18
PRIOR FILING DATE: 1998-02-18
PRIOR SEQ ID NOS: 33142
SEQ ID NO 25235
LENGTH: 339

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Description
